

Ethics of ChatGPT in CPE qualified assessment for CPAs  
Dov Fischer, Brooklyn College

March 29, 2025

Abstract:

AI presents an ethical challenge to the **CPA practitioner taking CPE**. As accounting rules continue to evolve and become more challenging to the CPE student, there is **temptation** to use AI for qualified assessment. The temptation is compounded by the **silence of NASBA** (2024) on the subject.

- One of the formats of Continuing Professional Education (CPE) for Certified Public Accountants (CPAs) are Self Study Programs with qualified assessment.
- ChatGPT and Artificial Intelligence (AI) present a challenge to the integrity and effectiveness of such assessments.
- AI correctly answers technical multiple-choice questions in accounting with an accuracy approaching 100 percent.
- AI presents an ethical challenge to the **CPA practitioner taking CPE**.
  - As accounting rules continue to evolve and become more challenging to the CPE student, there is **temptation** to use AI for qualified assessment.
  - The temptation is compounded by the **silence of NASBA** (2024) on the subject.
    - In the most recent standards revised in January 2024, there is no mention of AI.
  - Any **prohibition** on the part of the student against using AI for qualified assessment is at most **implicit** rather than explicit.
- The use of AI on qualified assessment may seem to be inherently “cheating”, but there is a **case** to be made that AI is **not cheating**.
  - First, the NASBA standards **do not prohibit cheating or assistance from outside sources**, although they do instruct the CPE providers to not provide feedback on failed attempts.
  - Second, there are **other formats** (Group Live and Group Internet) of CPE delivery which do not require qualified assessment.
    - As such, the purpose of qualified assessment may be to foster **engagement** rather than to test for mastery of material.
  - Third, the effective use of AI to answer qualified assessment questions represents a **skill** toward maintenance and advancement of **professional competency**.

- The argument can be made that this is the ultimate competency today.
- I argue that the primary ethical responsibility to address the AI challenge lies with CPE **providers** themselves *rather with CPE takers*.
  - One approach, which I **do not recommend**, is for providers to attempt to harness technology to try to **prevent** the use of AI by the students.
    - An example of such a futile attempt is to disable the ability to copy the question from the exam and to paste it as a ChatGPT query. Attempts such as this are futile because technology already exists to that will allow the student to easily circumvent such limitations.
  - Another approach, which I also do not recommend, is for the provider to ask the CPE taker to sign a statement that no AI was used in qualified assessment. I do not favor this approach because it is unfair to put students in an ethical quandary by presenting an easy temptation.
  - However, I would support a **variation** of this approach. Currently, the minimum passing grade on qualified assessment is 70 percent. If providers presented students with the following choice:
    - either choose to take the QA without the assistance of AI, in which the minimum passing grade will be lowered to 60 percent
    - or allow the use of AI but require a passing grade of 95%.
  - Under this approach, the CPE student will themselves **declare** which option they prefer.
    - Because of the inherent fairness in the approach, there is less of a risk of non-compliance or cheating.
    - This approach will also require the provider to change the nature of the questions so that they are more suitable for humans than for AI.
